

Helping patients get back in stride.

Many patients at Arroyo Grande Community Hospital's Acute Rehabilitation Center have suffered from a serious neurologic illness or injury that has left them unable to walk on their own. In order to address these needs with the most advanced technology, the acute rehabilitation team is looking forward to the purchase of the robotic exoskeleton: a remote-controlled motion technology that affixes to the patient's torso and legs to help them re-train their body to walk.

What are we waiting for?

This new therapy will be made possible by community support of our Muscular Skeletal Therapy program. Generous donations have helped us reach over half of our goal toward realizing this technology. **[Your generosity will help patients get back on their feet!](#)**

[Watch a video here](#) to see the dynamic application of the exoskeleton. You can learn more about the Muscular Skeletal Therapy program **[here](#)**.
